

## Chironemia

Tablets containing iron, lactoferrin, folic acid, vitamin C, B6 and B12. Chironemia contains iron in form of ferrous bisglycinate which contribute to formation of red blood cells and haemoglobin, reduction of tiredness and fatigue and plays a role in normal oxygen transport.

Lactoferrin is a natural protein, a transferrin that regulates the concentration of iron ions in the blood plasma and transports them to the tissues. Lactoferrin stimulates the development of a beneficial intestinal microflora and together with vitamin C supports healthy immune functions.

Vitamin B6 contributes to normal energy-yielding metabolism and regulation of hormonal activity.

Folates contribute to normal psychological functions, maintenance of normal vision and reduction of fatigue.

### Content:

IRON	40mg	286% NRV*
