

Actiferol Fe Start

Sachets

Food for special medical purposes.

For dietary treatment to ensure proper supply of iron and ingredients supporting haematopoietic processes and in states of anemia in newborns and infants born prematurely, with low birth weight and physiological anemia and in adults.

Iron is a microelement required for proper development and functioning of body. It contributes to proper development of cognitive functions in children. It contributes to the proper creation of hemoglobin and red cells which is really important for the growing body of a child. It helps in proper functioning of immunity system. It is an ingredient of hemoglobin which conditions transport of oxygen.

Actiferol Fe[®] contains unique form of iron put under micronization and emulgation. Thanks to micronization, i.e. great fragmentation, absorption of iron from iron pyrophosphate (III) is twice as high which is confirmed by researches. Iron contained in Actiferol Fe[®] is liberated in intestines, not in stomach. Thanks to that, there are no afflictions connected with digestive system.

Additionally, Actiferol Fe Start contains:

- vitamin B6 which helps in proper production of red blood cells
- vitamin C which contributes to increased absorption of iron that helps in proper production of red blood cells and hemoglobin
- folates complex which help in proper production of blood and take part in the process of cell division. Active folate is well absorbed and ready to be used by organism. Active folate secures people who have problems with absorption of folates from the standard folic acid.

Ingredients:

Ingredients: maltodextrin, iron (ferric diphosphate (ferric pyrophosphate); maltodextrin; emulsifier: lecithins); pyridoxine hydrochloride (vitamin B6); L-ascorbic acid (vitamin C); pteroylmonoglutamic acid (folates: folic acid); calcium-L-methylfolate (folates: active folate).

Nutritional value	100 g	Recommended daily intake: 1 capsule
